

IDIV

IDOIL 44

Constitution	natural oil self emulsifying
Appearance	yellow liquid
Character	non ionic
Active substance	100%

Method of use

IDOIL 44 is dilutable in any proportion with water and can be simply emulsified adding warm water. Its emulsion is fine and sufficiently stable.

IDOIL 44 can be used either in the wet side or in the finishing.

In the first case it is particularly advised for full grain chrome and veg leathers any time a good reactivity of the leather is required.

IDOIL 44 can be added in the fatliquoring bath together with the other fatliquors. The quantity: 0.7-1.2% on the shaved weight.

Its employment increases the reactivity of the skins leaving a very pleasant hand. This is the reason why **IDOIL 44** is particularly suitable for glazed and burnish leather.

IDOIL 44 can be used in the finish in the bottom coat: applied alone by roller coat machine or by pad it confers the leather softness and natural oily touch, without badly affecting the polishability and the glazeability; or it can be sprayed with all the grounds and casein binders of the **IDIV's** line, thanks to its non ionic character.

The veg leather processed with **IDOIL 44** can show a gentle and light pull up effect.
